

**WHY USE OUR PRODUCT SIZE TEMPLATE?**

Our product size template do not contain any designs. They are specific application files which include predefined guide-lines indicating bleed, safe zone, and trim lines. Using our templates correctly will prevent this from occurring.

You can download our product size template from our website. They are available in 4 softwares :

**THREE PRINCIPLE GUIDELINES**

1

**Full Bleed**  
(Artwork size)

- > Full Bleed enables your background design to extend to the edge of your end product.
- > If your background design is not in Full Bleed dimension, product will have a line along the edge.

If you do not create your background design in **Full Bleed** dimension, end product will have a line along the edge.

2

**Trim Size**  
(Product size)

- > Anything left outside this box may be CUT-OFF (trimmed away).
- > Borders are not recommended as they may appear uneven in the end product due to shifting in the cutting process.

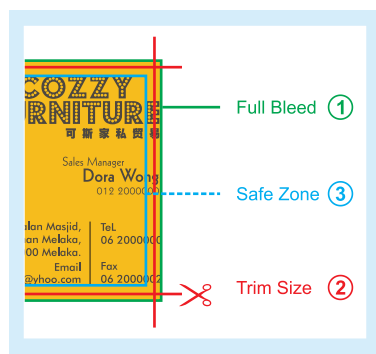

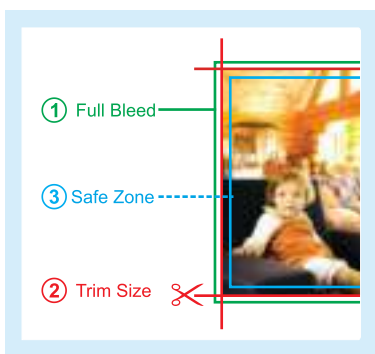

If you set your elements out of **Trim Size**, they may be cut off.

3

**Safe Zone**  
(Vital Elements)

- > Vital elements ( text, images, logos, etc.) **MUST** be keep within this area.
- > Anything left outside this box **MAY BE CUT-OFF** during trimming.

If you prepare your artwork following our 3 principle guidelines, your end product will look proportionate.

**ADDITIONAL NOTES**

1. Please remove the crop marks in your final artwork.

2. Please remove all guidelines and text description before you send your artwork file to us.
